

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

The Commissioner, by reason of frequent Returns of the Gout, does not sleep up-stairs, but in a very small Room behind the House, joining to the House, and communicating by a Door with one of the back Parlours. This Building is so low (being only a Ground-floor, without any Room over it), and is so skreen'd by higher Buildings, that hardly any Wind can affect it; especially the Wind which blew that Night; as the Body of the Commissioner's House was betwixt that and the Stroke of the Wind.

The Dock is about two Miles West from *Plymouth*, and about 220 almost West from *London*.

XLIII.

A Letter from Mr. Ph. Warburton to the President, serving to inclose an Extract of a Letter from the Rev. Mr. John Seddon, of Warrington in Lancashire, to Mr. Jo. Philpot, in Chester, concerning an Earthquake, April 2. 1750.

Dear Sir, Grange in Cheshire, June 10. 1750.

Read June 14.
1750.

THE inclosed Extract is the only written Account of the late Earthquake which I can obtain from any of the Naturalists in this Country: And as I have conversed with several intelligent Persons who perceived it, the inclosed Extract corresponds very exactly with their Sentiments and Observations upon it. I have now in my Custody

today the original Letter from Mr. *Seddon* to Mr. *Philpot*; and shall not part with it without your Direction.

I am, Sir, with the greatest Respect,

Your most humble Servant,

Ph. Warburton.

Extract of a Letter from the Rev. Mr. J. Seddon, of Warrington in Lancashire, to Mr. John Philpot in Chester, dated Warrington, May 10. 1750.

THE late Earthquake happen'd the 2d of *April*, at 10 at Night, as nearly as can be determin'd; if any thing, rather after than before. I was at *Liverpoole* at that time, where the Shock was not so sensible as at some other Places; and yet a Person in Company with us that had lived in *Jamaica* a great Number of Years, and well acquainted with Motions of this kind, having felt eleven in one Night, declared it to be the smartest he ever felt. The Duration of the Motion was every-where extremely short, not exceeding, as nearly as I can guess, 2 or 3 Seconds of Time.

As to the Nature of the Motion, as far as I can judge of it myself, and from the Observations of others, it seems to have been of the horizontal kind, proceeding in an undulating manner from North-West to South-East. I was in a sitting Posture, and the Motion I felt was like that of a Vessel falling from the Top of a Wave, and rising again upon the next. Mr. *Breckell* of *Liverpool*, and others that I have convers'd with upon the Subject, represent it in the same Way.

It

It is, I think, universally agreed, that an uncommon Noise attended the Shock, a Noise that much resembled distant Thunder, or a hollow rumbling Wind: Some Persons also say, that they perceived a fultry sulphureous Smell, much about the Time of the Shock; tho' that Day and Evening were remarkably cold; and whether this was real, or only imaginary, I cannot determine.

The Shock was felt as far North as *Lancaster*, and as far to the South as *Wrexham*, and the adjacent Parts; in all, about 70 Miles N and S. It was felt as far as *Stockport* and *Altringham* to the East, and quite into *Flintshire* on the West; that is, about 30 or 40 Miles East and West.

The Shock was not so great, or of so long Continuance, as to do any material Damage. I think I heard of a large *China* Jar falling from a Chimney-Piece in a Gentleman's House, of a Piece of Marble reared against a Wall falling and breaking, and two or three trifling Instances of that kind. There is only one thing further that I would mention upon the Occasion: As soon as I felt the Shock, I was immediately apprehensive what it was, and went out to see whether there was any thing remarkable in the Atmosphere. I then observ'd a very uncommon Appearance; *viz.* an infinite Number of Rays, proceeding from all Parts of the Heavens, converged to one Point; no luminous Body appeared at all. The Rays were at first of a bright Yellow; afterwards they became blood-red. This *Phænomenon* was not far from our *Zenith*. It continued about 20 Minutes, and then disappeared.

The ensuing Night was very stormy ; a large Quantity of Hail fell about Two in the Morning ; and the Barometer was extremely low.

Those are the principal Circumstances that I am acquainted with, relating to the late Earthquake. I depend upon your Candour and Goodness to excuse the loose manner in which they are thrown together.

XLIV.

*Mr. Henry Baker F. R. S. to the President,
containing an Extract of a Letter from
Mr. W. Arderon F. R. S. concerning an
Explosion in the Air, heard at Norwich,
June 7. 1750.*

S I R,

Read June 15. 1750. **M**R. *Arderon* writes me Word from *Norwich*, that, on *Thursday* last, the 7th instant, as he and a Friend were walking to take the Air, a little to the Westward of that City, they heard, about 7 o' Clock in the Evening, a kind of hollow Noise, as loud as that of a large Cannon. Which Noise was once repeated nigh the same Place as an Echo, and then continued dying as it were away for about half a Minute.

They saw no Lightning, nor any Clouds, except a few thin whitish ones in the Western Horizon.

It was heard, he says, by great Numbers of People in the City of *Norwich*, notwithstanding the continual
